Title: Board A — UHF front end + calibration noise source

Size: A3	Date:	Rev:
KiCad E.D.A. 10.0.3		Id: 1/5

Power: 12 V in, 5.6 V buck, low-noise 5 V and 3.3 V

CAL_EN (from the digitizer/FPGA, 1.8–3.3 V logic): high = noise source on and all switches on RF1 (cal).

Calibration noise source and 6-way splitter

Expected output: about −134 dBm/Hz per channel (ENR ~39 dB) after the 15.6 dB splitter.

RF channels 0–2

RF traces: 50 ohm grounded coplanar waveguide on L1 over solid GND on L2. Keep filter parts in line.
